

Help stop email security threats before they reach your customers.

The Cisco Spam & Virus Blocker provides a simple, yet powerful line of defense.

The Cisco® Spam & Virus Blocker is a dedicated antispam, antivirus, and antiphishing security appliance designed specifically for small businesses. Because the Cisco Spam & Virus Blocker works with your customer's server rather than individual desktops, there's no need to go from computer to computer installing software or training users. Just plug it into the existing network—and let your customers enjoy the benefits of a spam- and virus-free inbox.
